pipeline

FM Approved Polyethylene Piping

AGRU – Frank has become the first european manufacturer to achieve Factory Mutual (FM) Approval for High Density Polyethylene (PE100) pipes and fittings for underground fire protection service. The FM approval means that the pipes and fittings correspond to the highest requirements - ensuring consistent quality of the product range - achieved by means of a third party audit undertaken by FM.

PE100 piping is ideal for buried applications. It has exceptional ductility and will withstand very unfavourable ground conditions. It is also very easy to install using a simple butt fusion or electro-fusion welding technique.

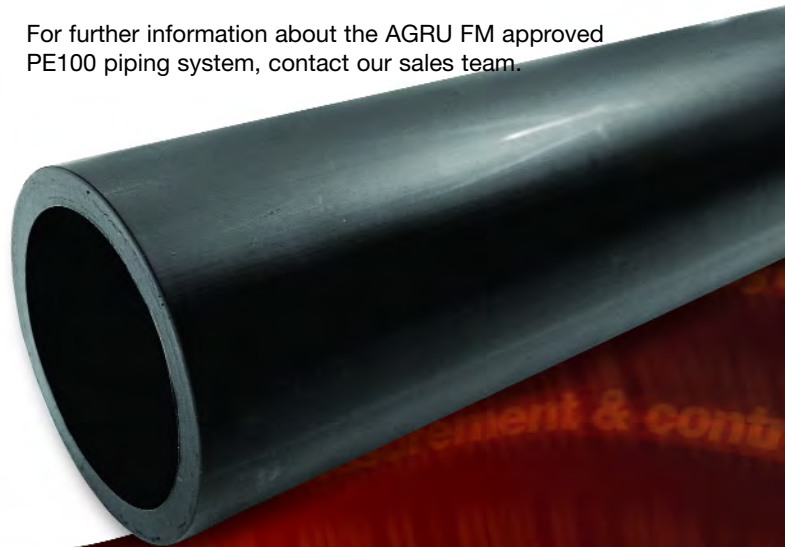

Many industrial and automotive groups require FM approval for infrastructure piping systems within their factories. This need can now be satisfied with a comprehensive range of approved pipes and fittings. The FM approval has been issued for the dimension range 63mm to 400mm, and it includes a wide and diverse range of fittings. The system is approved for use at a service pressure of up to 12 bar.

IPS can supply the complete range of FM approved AGRU piping systems together with documentation, as well as welding equipment for butt or electro fusion jointing. Comprehensive welder training is readily available on request.

For further information about the AGRU FM approved PE100 piping system, contact our sales team.

CPVC Fire Sprinkler Piping

CPVC fire sprinkler systems have a twenty year proven track record of success. Fast, quiet and easy to install, CPVC also has the additional benefit of low raw material prices when compared to steel.

Tested and listed by LPCB, UL and FM, the system can be used for many applications in commercial buildings as well as in residential occupancies. CPVC can easily be retro-fitted or used in new-build construction.

The range of CPVC fittings is specially developed for sprinkler systems and includes many adaptors, elbows and reducing fittings designed to make installation even easier.

IPS leads the market with comprehensive ex-stock availability on all sizes of material. Our daily despatch service means that we take orders for same-day shipping up to 4:30pm, with delivery to site guaranteed within 24 hours.
